

Responsible Coal

FutureCoal is committed to promoting responsible investment in coal and clean coal technologies, in developing, emerging and developed regions.

1

Commit to deliver a positive social and economic contribution to the countries and communities in which we are part; act with integrity, shared purpose and respect for individual cultures, customs and values.

2

Acknowledge the impact of climate change and importance of mitigating all emissions from coal; commit to actively supporting low emission coal technologies, investment and innovation.

5

Commit to the ultimate goal of zero harm and identify opportunities to build on our health and safety performance.

6

Support proactive engagement with our stakeholders in a way that shares knowledge, seeks opportunities to collaborate and recognises them as valued partners.

The Responsible Coal Principles (RCP) are our statement of intent in support of the UN Sustainable Development goals.

They recognise that our stakeholders, including governments and investors, are looking to partner with organisations which embody these principles – seeking to make a positive contribution to society and sustainability.

The principles reflect the common goals of our diverse membership:

3

Commit to mitigate the environmental impacts of our operations and contribute to the conservation of biodiversity.

4

Seek to promote an inclusive business environment within our operations, where our people are respected, engaged, recognised and developed.

7

Conduct business to a high level of integrity and compliance; creating long-term value and embedding sustainability matters into decision-making processes.

The members of Future Coal Global Alliance are signatories to the Responsible Coal Principles.
